

*DigiTimes* reports can be shaky at the best of times, but this one takes the digi-biscuit. Reporting on an apparent order by HTC with Pegatron for the production of a new Android-based "tablet PC," *DigiTimes* claims the new development will help Pegatron achieve its goal of being one of the top four global notebook manufacturers. So is this a tablet or, dare we say it , a smartbook ? Nobody clarifies that point, but specs are said to include a 1280 x 720 widescreen display, a 32GB SSD, 2GB of RAM, and Tegra 2 under the hood. Android Market support is also expected (huzzah!), though pricing might be steep at around \$790 unsubsidized. At this stage, we'd be more surprised if HTC *doesn't* bring out a tablet in the next few months, but we wouldn't invest too much of our emotions into this report just yet. Maybe once Mr. Blurrycam decides to join the fray and give us something to look at.
